Figure 9. (a) Ratio between rotational and gravitational energies, β , plotted against the ratio between the kinetic and gravitational energies, $\Omega_K/|\Omega_G|$, for larger-scale dense cores (green dots), droplets (blue filled dots), and droplet candidates (blue empty dots). The red line corresponds to the relation, $E_{\text{rot}} = |\Omega_G|$, and the red band marks the parameter space within an order of magnitude from this relation. The parameter space to the right of the red line corresponds to $|\Omega_G| < \Omega_K$, and the left corresponds to $|\Omega_G| > \Omega_K$. The horizontal black line marks the median value of β for all cores shown in the figure (both dense cores and droplets; excluding droplet candidates). (b) Ratio between rotational and total kinetic energies, E_{rot}/Ω_K , plotted against the ratio between the kinetic and gravitational energies, $\Omega_K/|\Omega_G|$, for larger-scale dense cores (green dots), droplets (blue filled dots), and droplet candidates (blue empty dots). Same as in (a), the red line corresponds to the relation, $E_{\text{rot}} = |\Omega_G|$ and separates the parameter space into one corresponding to objects being bound by self-gravity (left) and another corresponding to objects not being bound by self-gravity (right). The horizontal black line marks the median value of $E_{\text{rot}} = |\Omega_G|$ for all cores shown in the figure, excluding droplet candidates.

Droplets are essentially pressure-bound cores in a dynamical flow, and their rotation comes from that..
Chen et al. 2019 (cf. Burkert & Bodenheimer 2000).

The Radcliffe Wave

presented by Alyssa Goodman,
Center for Astrophysics | Harvard & Smithsonian,
Radcliffe Institute for Advanced Study

Nature paper by: João Alves^{1,3}, Catherine Zucker², Alyssa Goodman^{2,3},

Cosmology

The Radcliffe Wave

CARTOON*

DATA

**drawn by Dr. Robert Hurt, in collaboration with
Milky Way experts based on data; as shown in
screenshot from AAS WorldWide Telescope*

The Radcliffe Wave

Each **red** dot marks a star-forming blob of gas whose distance from us has been accurately measured.

The Radcliffe Wave is **2.7 kpc**, and **~120 pc wide**, with crest and trough reaching **160 pc** out of the Galactic Plane. Its gas mass is **more than three million** Solar masses.

*video created by the authors using AAS WorldWide Telescope
(includes cartoon Milky Way by Robert Hurt)*

The Radcliffe Wave

ACTUALLY 2 IMPORTANT DEVELOPMENTS

DISTANCES!!

We can now
measure distances
to gas clouds in our
own Milky Way
galaxy to ~5%
accuracy.

Zucker et al. [2019](#); 2020

RADWAVE

Surprising *wave-*
like arrangement
of star-forming gas
is the "Local Arm"
of the Milky Way.

Alves et al. 2020

DISTANCES!!

We can now measure distances to gas clouds in our own Milky Way galaxy to ~5% accuracy.

requires **special** regions on the Sky (HII regions with masers)

can be used **anywhere** there's dust & measurable stellar properties

DISTANCES!!

We can now
measure distances
to gas clouds in our
own Milky Way
galaxy to ~5%
accuracy.

Uncertain Distances

SCHEMATIC CARTOON(!)

Distances estimates **BEFORE** 3D dust mapping & Gaia (~30%)

"The Radcliffe Wave"

SCHEMATIC CARTOON(!)

Distances estimates **AFTER** 3D dust mapping & Gaia (~5%)

HOW= 3D dust mapping*

RADWAVE
Surprising **wave-like** arrangement of star-forming gas is the "Local Arm" of the Milky Way.

João Alves, Catherine Zucker, Alyssa Goodman, Joshua Speagle, Stefan Meingast, Thomas Robitaille, Douglas Finkbeiner, Edward F. Schlafly, and Gregory Green 2020, *Nature* (today)

Alves et al. Nature paper & two distance catalog papers by Zucker et al. (2019, 2020) include several interactive figures (via plot.ly & [bokeh](https://bokeh.org)), and deep links to data (on [Dataverse](https://dataverse.org)) and code (on [GitHub](https://github.com)) inspired by AAS "Paper of the Future" (Goodman et al. 2015)

RADWAVE

Surprising **wave-like arrangement** of star-forming gas is the "Local Arm" of the Milky Way.

"So What," for Astronomers?

demise of "Gould's Belt"

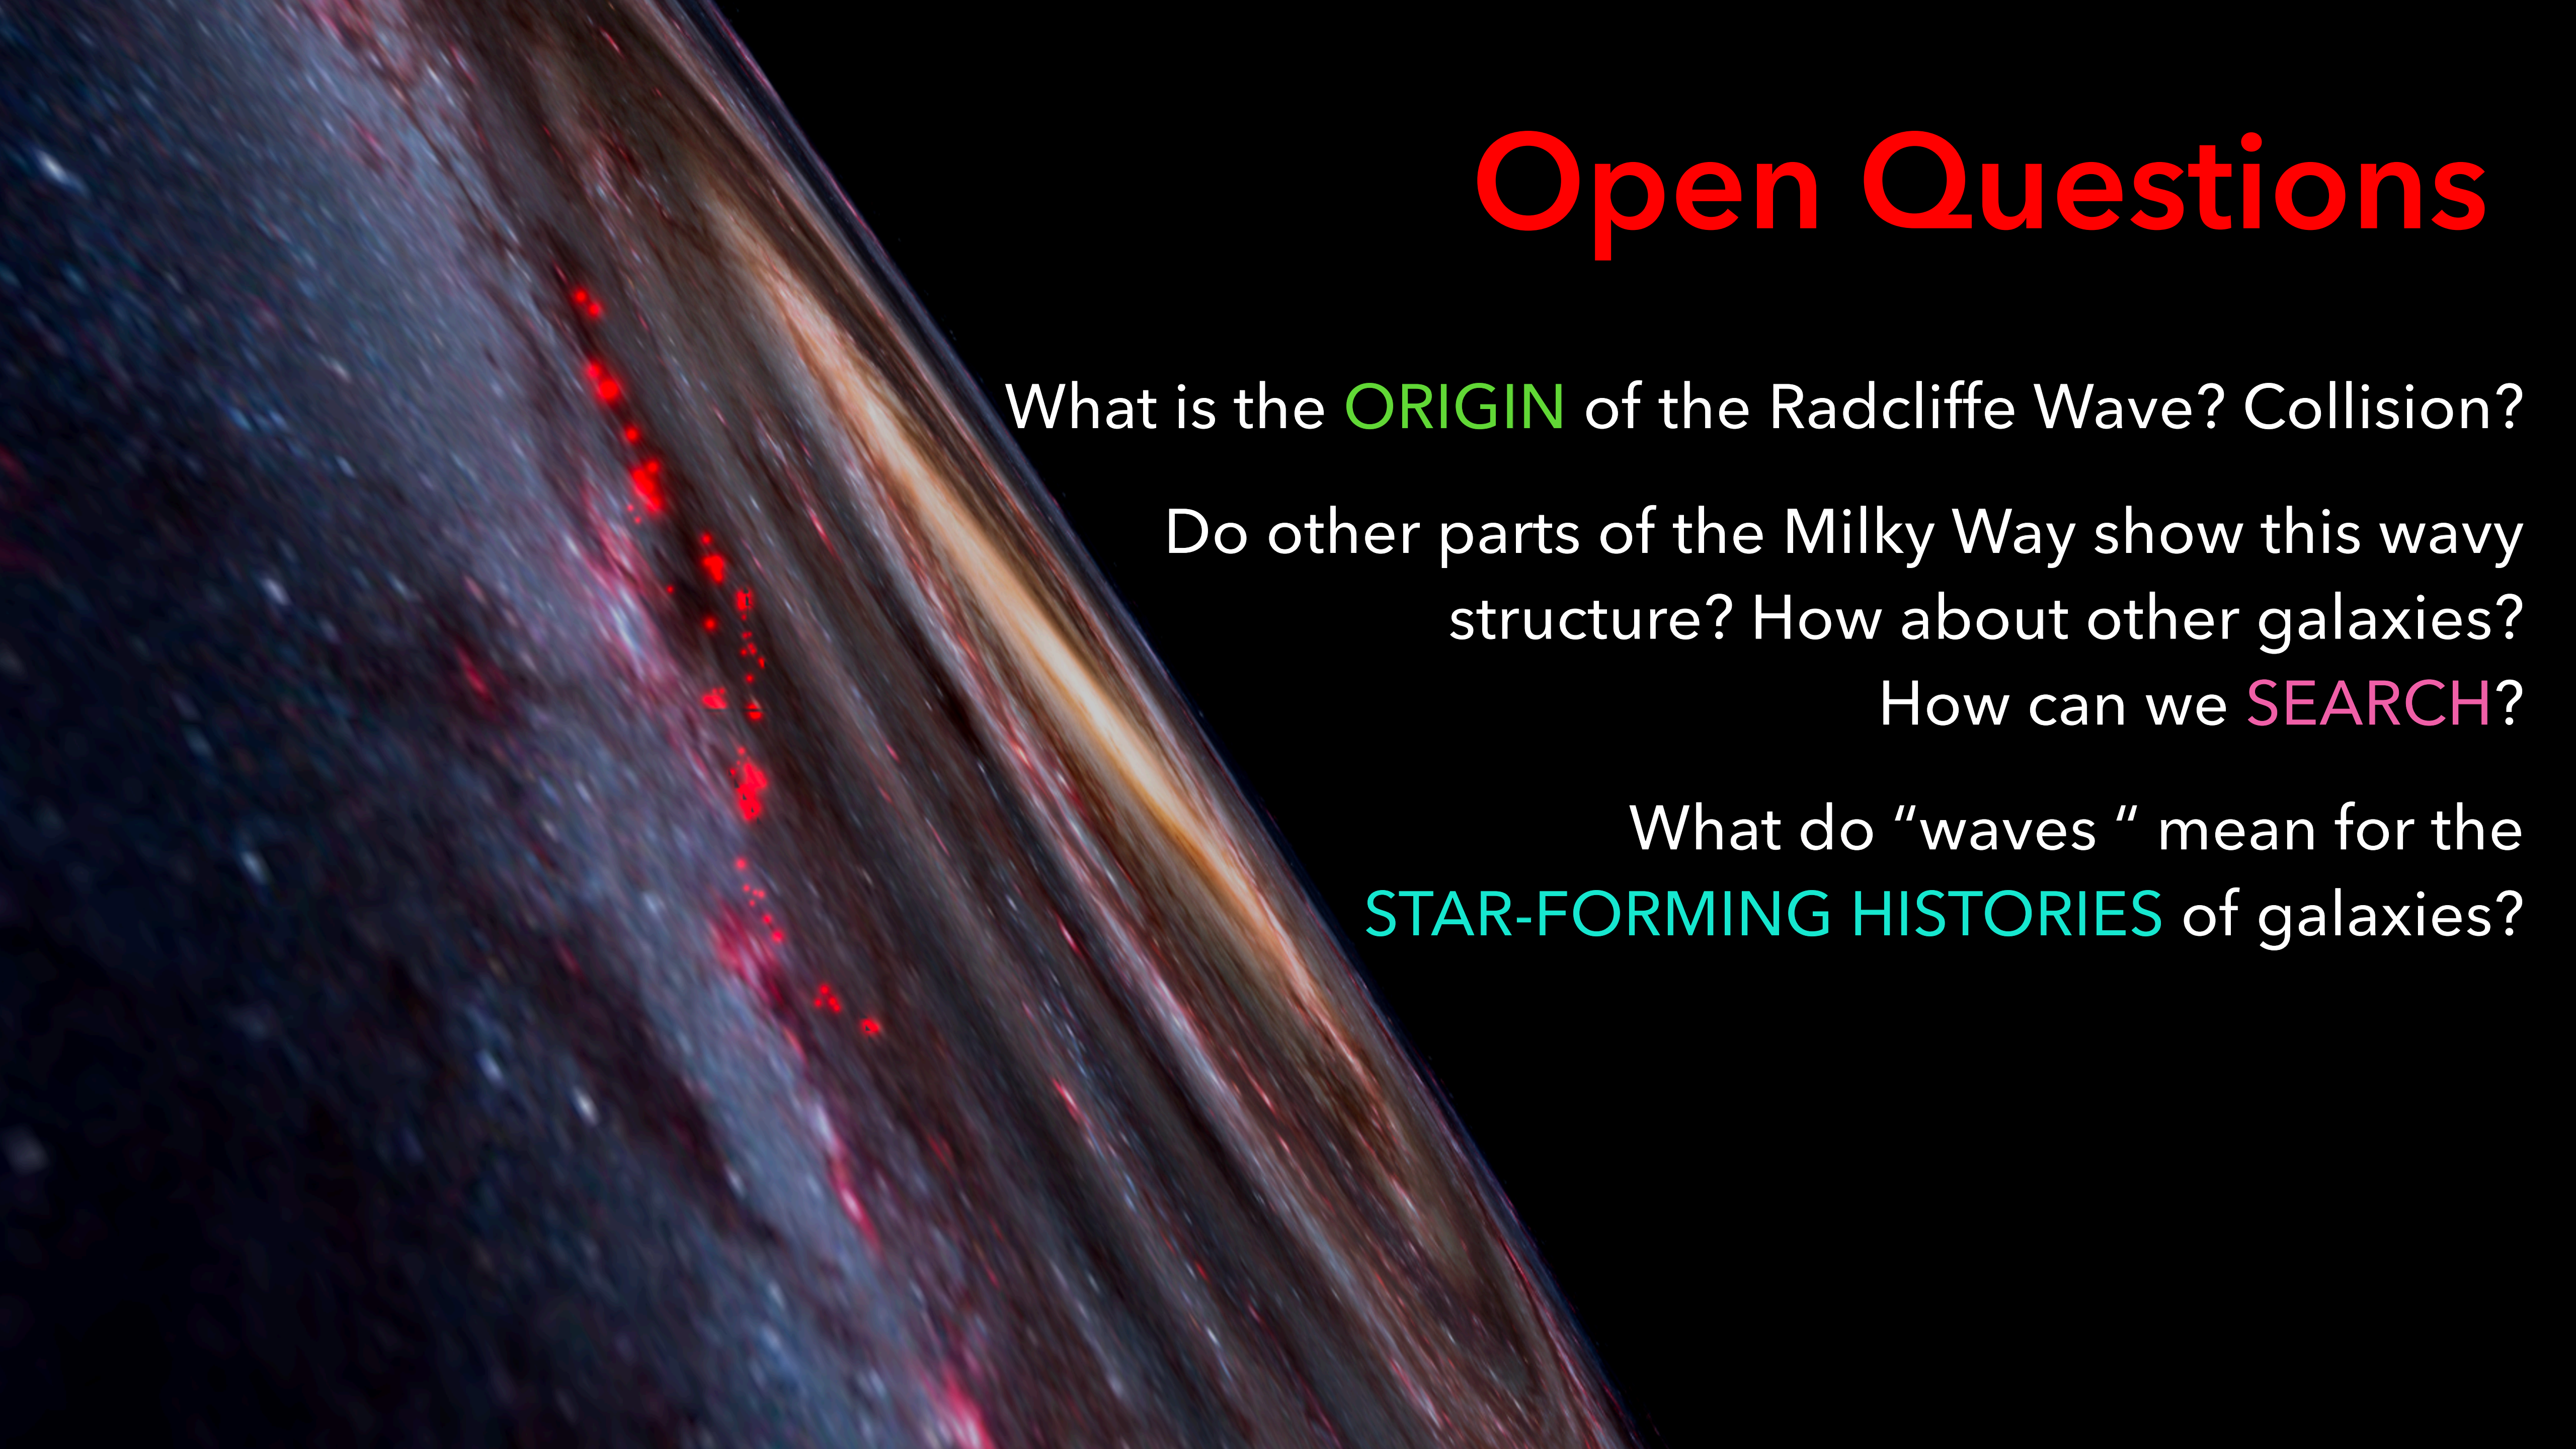

end to 100-year-old paradigm

"Local Arm" not shaped as we thought it was, locally

arm is "straight" from top-down

big wave in "arm" never previously observed

wave's origin unknown (collision? dark matter? accretion?)

Open Questions

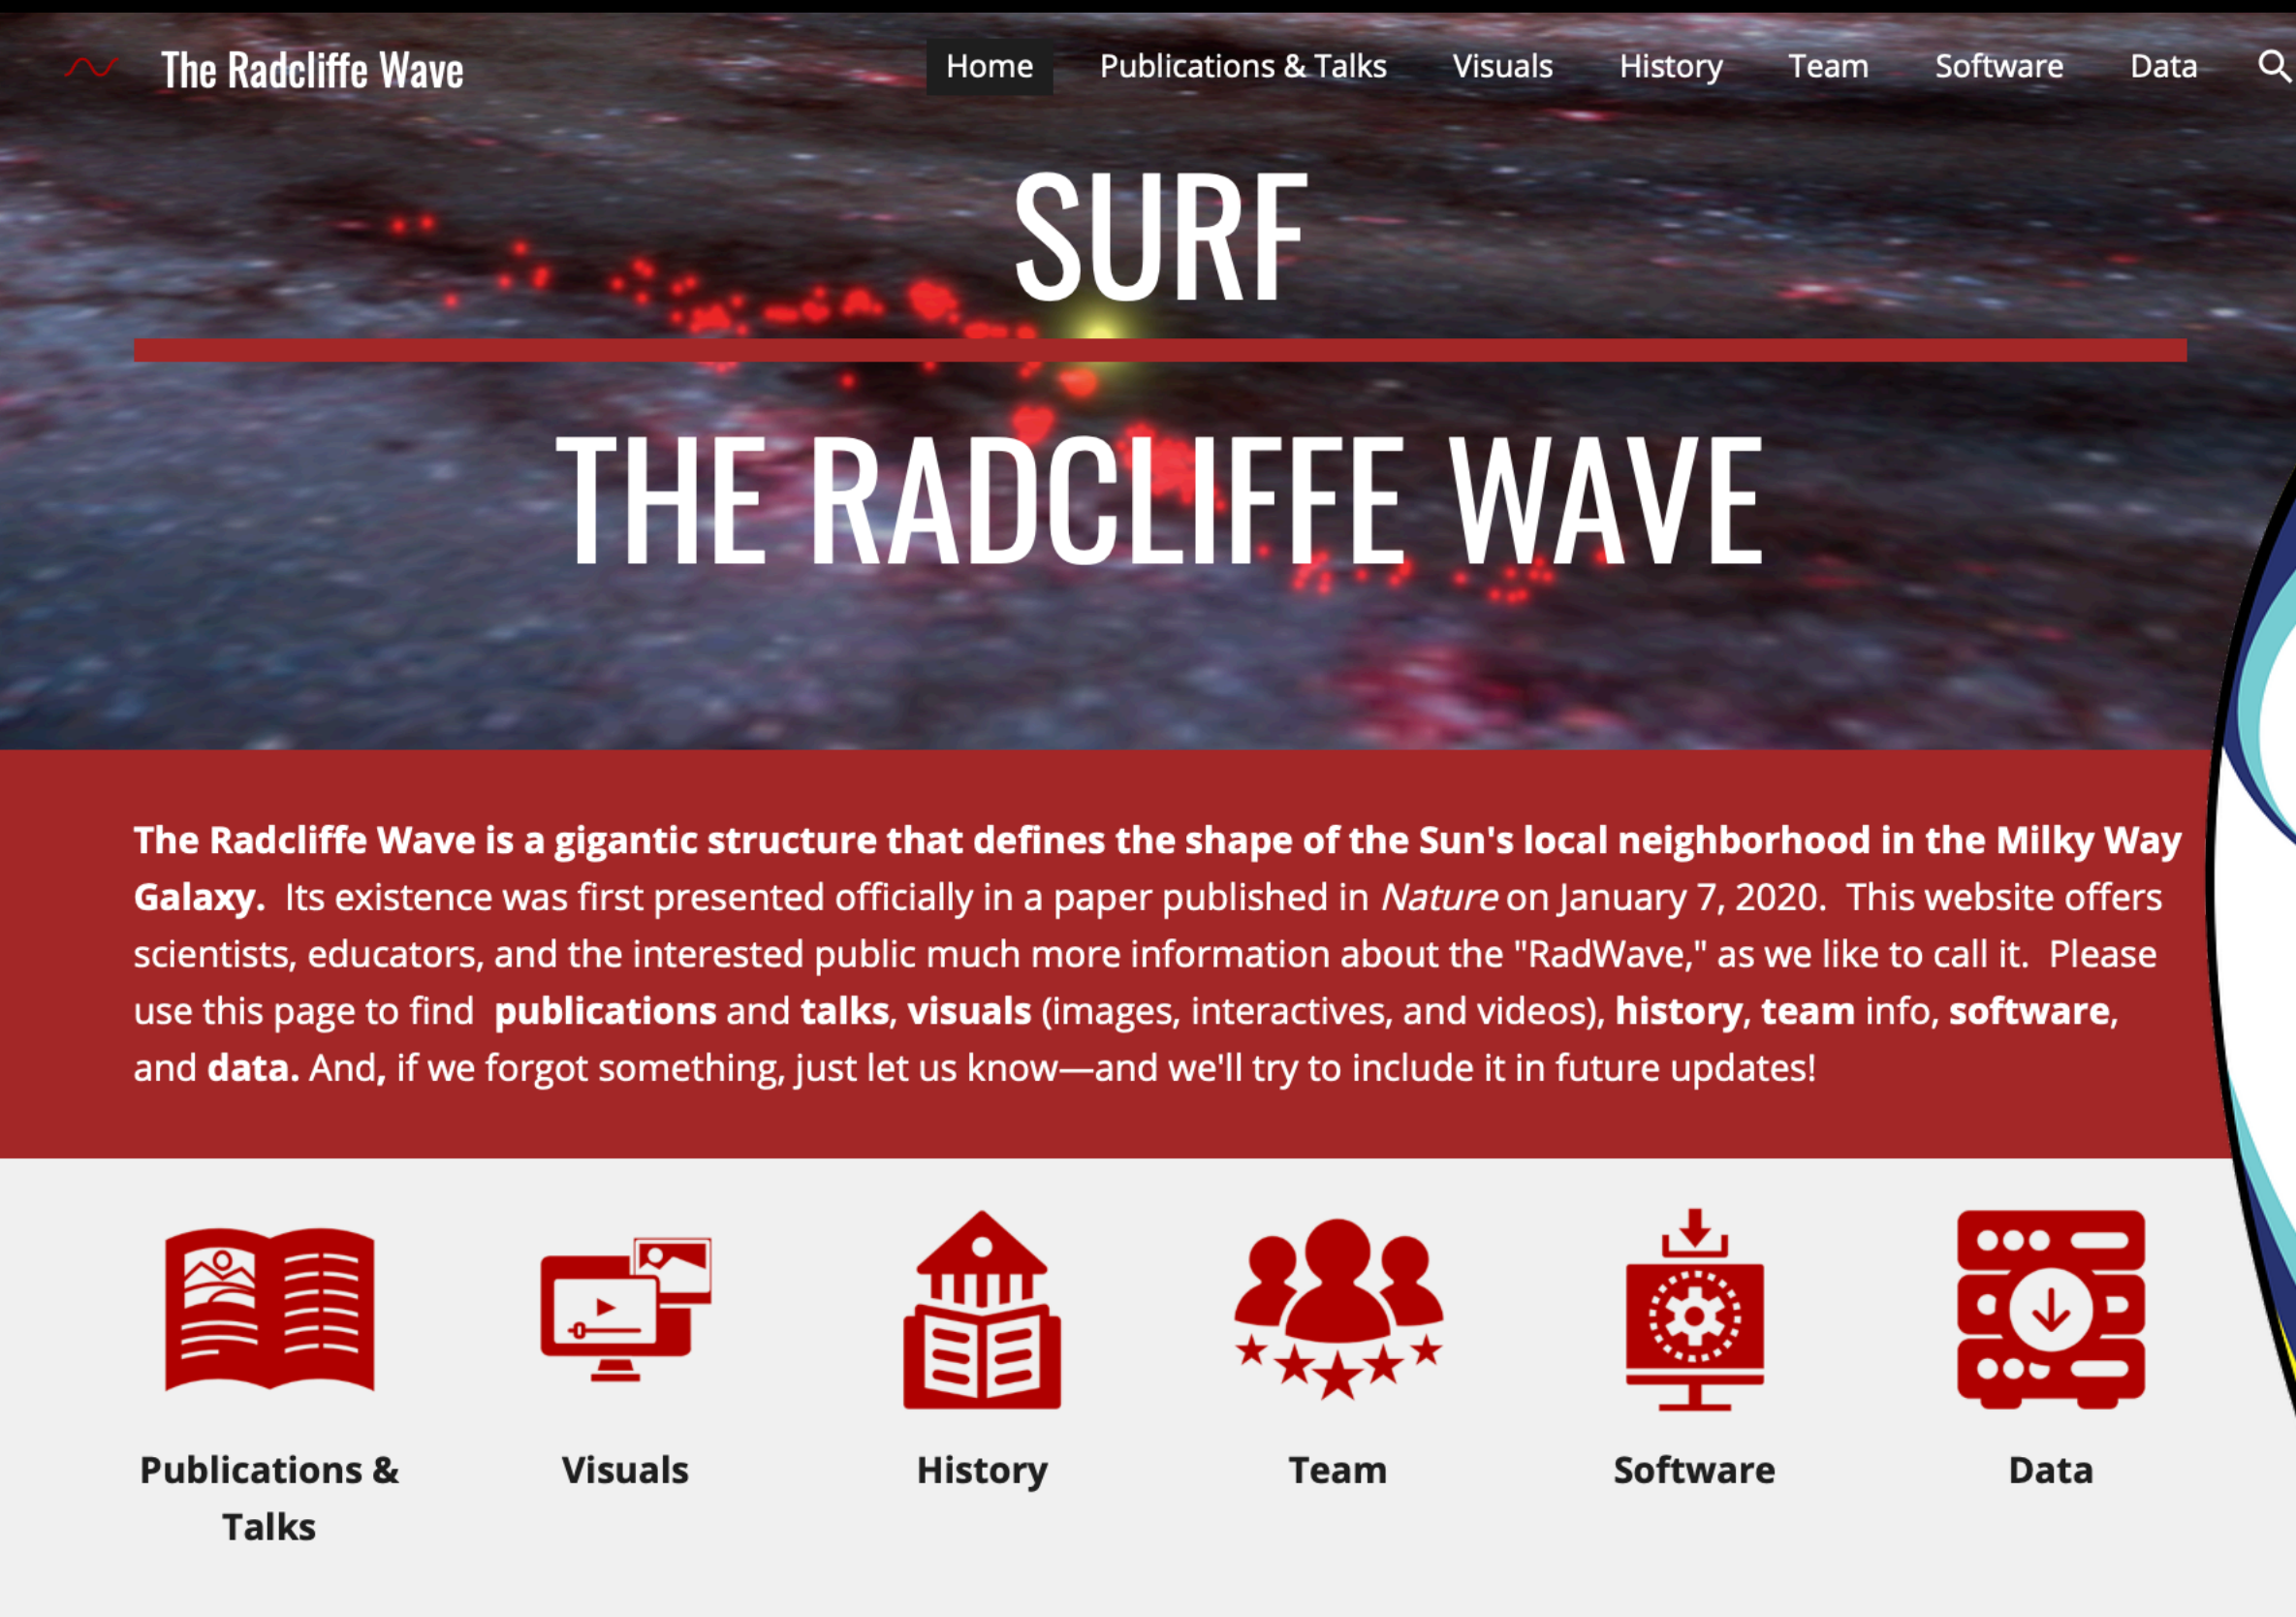

What is the **ORIGIN** of the Radcliffe Wave? Collision?

Do other parts of the Milky Way show this wavy structure? How about other galaxies?

How can we **SEARCH**?

What do "waves" mean for the **STAR-FORMING HISTORIES** of galaxies?

SURF

THE RADCLIFFE WAVE

The Radcliffe Wave is a gigantic structure that defines the shape of the Sun's local neighborhood in the Milky Way Galaxy. Its existence was first presented officially in a paper published in *Nature* on January 7, 2020. This website offers scientists, educators, and the interested public much more information about the "RadWave," as we like to call it. Please use this page to find **publications** and **talks**, **visuals** (images, interactives, and videos), **history**, **team** info, **software**, and **data**. And, if we forgot something, just let us know—and we'll try to include it in future updates!

Publications & Talks Visuals History Team Software Data

It appears that the Sun, on its galactic orbit, crossed the Radcliffe Wave 13 million years ago, and may cross it again in the future.

*video created by the authors using AAS WorldWide Telescope
(includes cartoon Milky Way by Robert Hurt)*
